

PGY-1 Pharmacy Residency Program
Progressive Community Health Center/24-Month Practice & Academic Leadership Emphasis
What do our Residents Say?

1. What sort of qualities do you look for in a resident that you believe would be successful in your program?

I think that time management skills are extremely important because you will be responsible for many things in teaching, clinic, and your

consideration of other co-morbidities Due to this, new visits tend to be 1 hour and follow up visits are 30 minutes.**Are there opportunities to be involved in public health & wellness promotion, such as health fairs or point of care testing clinics?**

There are opportunities to be involved in public health and wellness promotion and health fairs. Progressive Community Health Center is a federally qualified health center with a main priority of making sure that patients in the surrounding Milwaukee community have access to health resources. Health fairs are held on site and residents are able to go out and participate in these events as well. You will also have the opportunity to lead discussions in a Diabetes Group held every month for patients that are enrolled. Typically, many of these patients enrolled in this group are also clinic patients that will either see you or another member of the pharmacy team.
